Code RPG

1 Player Control	You control a <input type="text" value="Player"/>	in this <input type="text" value="top Down"/>	<input type="text" value="game"/>
	where <input type="text" value="Uses arrow keys"/>	makes the player <input type="text" value="Move up/down/sideways"/>	
2 Basic Gameplay	During the game, <input type="text" value="bugs/quest"/>		appear from <input type="text" value="glitches/people"/>
	and the goal of the game is to <input type="text" value="Beat copilot"/>		
3 Sound & Effects	There will be sound effects <input type="text" value="When you fix a bug: dying sound"/> <input type="text" value="When you fail: Sad trombone"/> <input type="text" value="When a bug spawns: Windows error sound"/>		and particle effects <input type="text" value="When you fix a bug: disintegrate"/> <input type="text" value="When you fail: teleport to latest spawn point"/>
	[optional] There will also be <input type="text" value="When walking through a door the roof goes see through"/>		
4 Gameplay Mechanics	As the game progresses, <input type="text" value="You find tougher bugs and learn better skills"/>		making it <input type="text" value="Fun to continue grinding but not making to to difficult"/>
	[optional] There will also be <input type="text" value="Crafting custom tools / skills with items collected during quests"/>		
5 User Interface	The <input type="text" value="level"/>	will <input type="text" value="increase"/>	whenever <input type="text" value="You defeat multiple bugs"/>
	At the start of the game, the title <input type="text" value="Code RPG"/>		and the game will end when <input type="text" value="Beat copilot"/>

We are going to use Visual Studio code as ide because its used by many people and it has really good extension for C# ,C# is a general-purpose, high-level, versatile, easy-to-learn programming language that when combined with technologies such as Unity for game development creates a powerful developer and execution experience

Bug fight:
